**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Juneke Jackson on 07/29/2011.

The application has been amended as follows:

**Claims 38-51 are canceled.**

**Claim 52 is amended** as follows

52. An apparatus for load limiting in an aircraft high-lift system, with the aircraft high-lift system having:

a branching drive system for mechanical power transmission to drive stations of individual segments of landing-flap and/or leading-edge slat systems via a drive unit, respective drive trains, and position sensors ~~and a drive unit~~,

wherein the position sensors have an angle position transmitter on the drive unit, and angle position transmitters, which operate as asymmetry transmitters, at the ends of the drive trains,

wherein the apparatus has a monitoring unit for load limiting which is connected to the position sensors and is designed to process signals from the position sensors by measuring signals from at least two position sensors and calculating at least one reference variable from the measured signals, and,

by comparison of the at least one reference variable which represents a load in the drive trains with a corresponding threshold value which is predetermined from a maximum permissible load,

whereas the monitoring unit is provided to carry out a signal comparison between a respective subsystem in a port wing and a respective subsystem in a starboard wing and each subsystem comprises a drive train, an angle position transmitter which is located at the end of the drive train, and the angle position transmitter which is located on the drive unit,

whereas the monitoring unit produces a control signal for monitored limiting of a power supply to the drive unit in the sense of limiting a drive power that is supplied,

whereas the position sensors have angle position transmitters on branching transmissions of the drive trains, and ~~whereas the position sensors which are located at each of the ends of the drive trains and an angle position transmitter which is located on the drive unit are provided,~~ whereas the monitoring unit is provided in order to calculate the at least one reference variable, which represents the load in the drive train from its signals.

2. The following is an examiner's statement of reasons for allowance: the prior art does not disclose or render obvious a load limiting system for a flap or slat system where angle position transmitters are placed at the ends of drive trains, on a drive unit, and on branching transmissions with a controller that compares the angles of the sensors to determine if a maximum amount of allowable rotational skew has been reached.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRIAN M. O'HARA whose telephone number is (571)270-5224. The examiner can normally be reached on Monday thru Friday 10am - 5pm except the first Friday of every Bi-week.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy D. Collins can be reached on (571)272-6886. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
